Abstract:

Motor-Pump Unit

ABSTRACT OF THE DISCLOSURE

The invention relates to a motor-pump unit \pm for a motor vehicle brake system, comprising a motor [4] and a pump 3 which is provided with a shaft 5 that is driven by said motor [4], with the shaft end ± 5 being rotatably mounted by means of at least one bearing 8 in an accommodating member 2 having valves and connecting channels, said shaft 5-driving displacement means which are disposed in a chamber ± 11 that can be filled with pressure fluid. In order to improve vacuum filling of the brake system with pressure fluid, the invention discloses that the shaft end ± 5 terminates into a free space ± 6 , and that at least one connection ± 9 is provided between the free space ± 6 and the chamber ± 11 .
